PUSD on BCH

Prompts set intent.
The transaction enforces the limit.

Per-period PUSD budgets
for people and AI agents.

streamvault-cash.vercel.app

The trust gap

PROMPT CAP

Can be ignored

A natural-language instruction is not a transaction rule.

No enforcement

CUSTODY

Can freeze funds

A third party controls the key and the release path.

Counterparty risk

COVENANT

VM-enforced

Category, amount, age and outputs are checked on spend.

Rules execute

The spending limit must live in the transaction, not the prompt.

www.bchblaze.cash

One covenant, three users

01 SPONSOR

Locks PUSD. Keeps cancel control.

02 WORKER

Claims one tranche per period.

03 AGENT

Pays a service per request.

Shared rules: claim(), cancel(), amountPerPeriod, periodBlocks.

3 spend paths

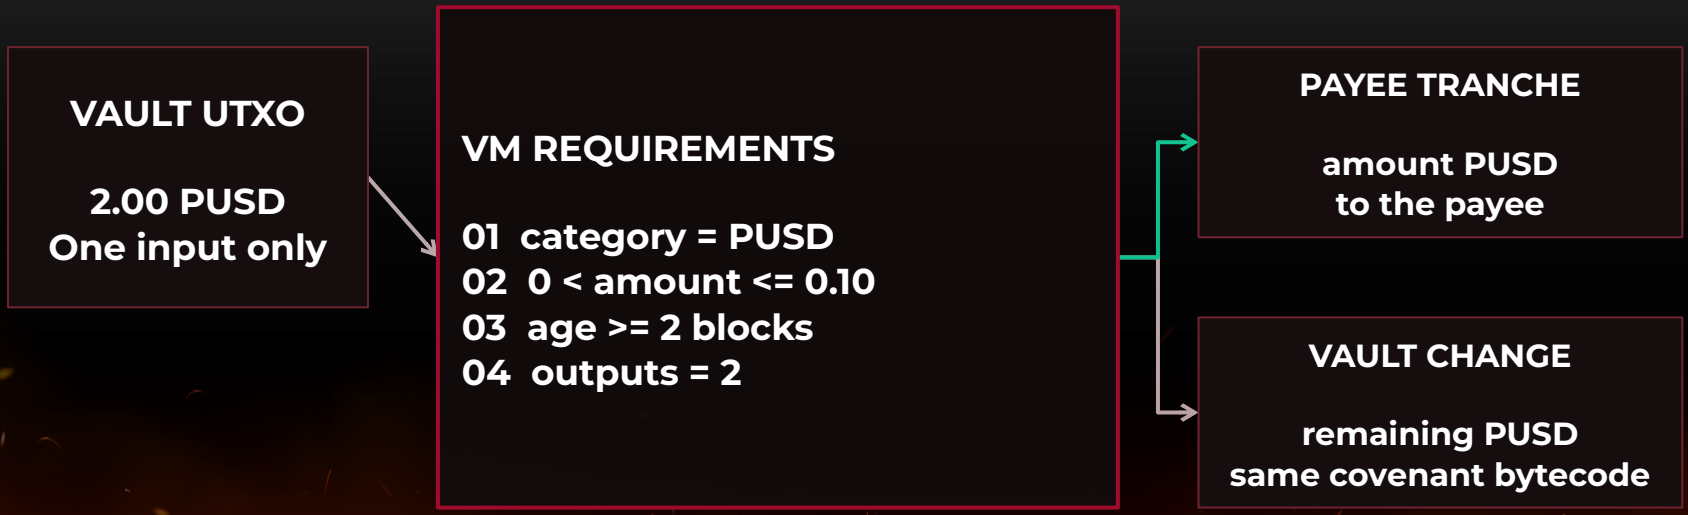

claim · topUp · cancel

21 VM tests

run against the real BCH VM

The VM checks four things before PUSD moves

PAYER CANCEL
Sweeps 100% of the remaining PUSD.

Claims cannot empty the vault.

Why BCH, who pays

WHY BCH

01 Sub-cent fees make $0.01 calls viable
02 CashTokens conserve PUSD on chain
03 Relative timelocks enforce the period
04 WizardConnect keeps keys in the wallet

WHO PAYS

Agent builders
Budget console for agent fleets (subscription)

API & MCP tool providers
SDK that verifies each $0.01 PUSD call

Hosted gateway
Small fee per verified call; self-hosting is free

No protocol fee in the covenant.
First market: paid MCP tools and data APIs.
